Art Unit: 1641

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 03 February 2009 has been entered. Claims 2-6, 8, and 10-16 have been cancelled. Claims 1, 7, and 9 remain in the case.

Applicant's amendments limiting the claims, the statement of Katsuhiko Katayama, and the copies of the receipt forms sent by the International Depositary Authority showing that viable cell lines were deposited under the terms of the Budapest Treaty, filed 03 February 2009 are sufficient to place the deposits of the hybridomas designated as Trk49 (FERM BP-8249) and Trk62 (FERM BP-7890) in compliance with the Deposit rules and have obviated the prior rejections under the first paragraph of 35 U.S.C. § 112.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1, 7, and 9 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1, 7, and 9 are vague in the absence of recitation of deposit accession numbers to clearly identify the antibody/hybridoma because, absent the recitation of deposit accession

Art Unit: 1641

numbers, it is not clear what structure and properties are encompassed by the antibodies named as “Trk49” and “Trk62.”

In claim 7, it is not clear which of the carriers in claim 1 is being limited. The examiner would suggest in claim 1, --wherein the first antibody and the second antibody are both adsorbed on a first carrier, or wherein the first antibody is adsorbed on a first carrier and the second antibody is adsorbed on a second carrier dispersed in solution or is dissolved in a solution--, and in claim 7, --wherein the first carrier--.

Applicant's arguments filed 05 February 2009 have been fully considered but they are not deemed to be persuasive. Notwithstanding applicant's assertions to the contrary, applicant's amendments have not obviated rejections under this statute for the reasons set forth above.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 1641

Claim 9 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 10-13 of U.S. Patent No. 7,074,903. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of both the patent and the instant application encompass kits comprising solid phase-immobilized Trk62 (FERM BP-7890) and a second antibody, generically in the patent and specifically in the instant application. However, the Trk49 (FERM BP-8249) antibody is fully disclosed in the patent as useable with the Trk69 antibody in sandwich assays, and there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application, which matured into a patent. Further, particulate labels are notoriously old and well known in the art as is their use in sandwich immunoassays and it would have been obvious to have labeled the second antibody of the kit in the patent with such a label for detection.

Applicant's arguments filed 05 February 2009 have been fully considered but they are not deemed to be persuasive.

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
